Professional Summary

Full Stack Developer with a back-end focus, specialized in **TypeScript, Node.js and NestJS**. I turn manual processes and disconnected systems into in-house, integrated platforms. I have architected from scratch a system that runs a company's operations end to end, from the e-commerce order to invoice issuance and inventory write-off, integrated with the ERP and payment gateways, replacing the legacy WordPress setup with **Next.js and NestJS** without stopping operations. The new e-commerce is **90% faster** than the previous store, improving sales efficiency.

Back-end is where I have the most experience. I have also built APIs in **Node.js and NestJS** with **Clean Architecture** for more than **23 client projects** in agribusiness, healthcare, financial management and logistics, handling complex business rules and requirements gathered directly with clients.

I have experience with **ERP integrations**, such as OMIE, ERPFLEX, Datasul/TOTVS and Bling. I build mainly with **TypeScript, Node.js, NestJS and Next.js**, along with **workflow automation** in n8n. I work with **relational** (PostgreSQL and MySQL) and **non relational** (MongoDB) databases, and I manage my own **infrastructure**: Linux VPS, Docker, Nginx, AWS S3 and CI/CD pipelines.

Technical Skills

Languages: TypeScript, JavaScript, Python, PHP, SQL
Back-end: Node.js, NestJS, Express, REST APIs, Prisma, TypeORM, Zod, Swagger, Redis, BullMQ, FastAPI, Flask
Front-end: Next.js, React, Angular, Redux, Vite, Tailwind CSS, HTML5, CSS3/SASS
Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase
Security: JWT (with refresh tokens), RBAC, multi-tenancy, bcrypt, input validation
DevOps & Infrastructure: Linux/Bash, Docker, Docker Compose, Nginx, VPS, Cloudflare, PM2, AWS S3, CI/CD, Vercel
Integrations: ERPs (OMIE, ERPFLEX, Datasul/TOTVS, Bling), CRM (RD Station), WooCommerce, Frenet, payments
Automation & AI: n8n, Apify, Google Gemini API, LLMs/Generative AI, Streamlit
Practices: Clean Architecture, MVC, legacy system migration, requirements gathering, Scrum, Kanban
Tools: Git, GitHub, Postman, Figma, WordPress
Languages (spoken): Portuguese (native); English (advanced)

Professional Experience

Freecook Brasil — Campinas, SP, Brazil (On-site)
Full Stack Software Developer, Full-time — *Mar 2026 to Present*

- Architected and built from scratch the digital platform that runs operations end to end, from the e-commerce order to invoice issuance and inventory write-off, bringing the **online store, admin panel, sales portal and corporate website** into a single integrated system.
- Led the migration from legacy **WordPress** to an in-house stack in **Next.js, NestJS and TypeScript**, defining code standards, API structure and a migration strategy with no downtime, while maintaining the legacy **PHP/MySQL** store during the transition. The new e-commerce is **90% faster** than the previous store, improving sales efficiency.
- Migrated the ERP integration from **ERPFLEX** to **OMIE** without interrupting sales, ensuring consistency of inventory, orders and customer data.
- Implemented queues and asynchronous processing with **Redis and BullMQ** for the platform's background jobs.
- Built **n8n** automations orchestrating flows between the ERP, CRM (RD Station) and internal systems, eliminating manual work in marketing and operations.
- Integrated payment gateways, REST APIs and logistics (**Frenet**), with file storage on **Amazon S3** using presigned URLs.
- Set up and maintain the infrastructure: **Linux VPS, Docker, Nginx, SSL, Cloudflare**, **CI/CD** pipelines and automated backups.

CroSoften Tecnologia — São Paulo, SP, Brazil (Remote)
Back-end Software Developer, Contractor, part-time — *Jan 2026 to Aug 2026*

- Developed and maintained the back-end of **23 client projects** in **Node.js, NestJS and TypeScript**, applying **Clean Architecture** to ensure maintainability and scalability.
- Implemented complex business rules, authentication, role-based permissions and integrations with multiple external APIs.
- Designed the project databases and, in some projects, built the interfaces from the design team's **Figma** prototypes.
- Documented the APIs with **Swagger**, enabling parallel consumption by mobile (**iOS**) and front-end (**Angular**) applications.
- Worked directly with clients on requirements gathering and technical scoping, using **Scrum and Kanban**.
- Projects across multiple domains: agribusiness (Vitrine do Campo), healthcare (Cardio Shop), financial management (SAFE/ERICA), logistics (Ships Manager), Minha Revenda and Cupom Clube, among others.

DBS System Consultoria — Campinas, SP, Brazil (Remote)
Full Stack Software Developer, Contractor — *Sep 2025 to Dec 2025*

- Gathered requirements with the business team, identifying bottlenecks in the legacy applications of industrial clients and proposing the replacement architecture, while following development in **Progress**, the ERP's native language.

- Rebuilt integrations with the **Datasul ERP (TOTVS)**, replacing manual data exchange with direct API consumption and reducing the risk of inconsistency between systems.
- Developed REST APIs in **Node.js and PHP**, with **PostgreSQL and MySQL** persistence, to support the new integrations.
- Rebuilt legacy interfaces with **Next.js and TypeScript**, modernizing the experience without interrupting production.
- Delivered a fixed-scope project in 4 months, with full ownership of technical decisions and schedule.

Grupo EMS Hortolândia, SP, Brazil (On-site)
IT Apprentice, Cybersecurity, Full-time *Jan 2025 to Sep 2025*

- First corporate role, on the **Cybersecurity** team: built **Python** automations that extracted data from Excel spreadsheets and generated ready-to-use reports for the teams, cutting the time spent on these tasks by **40%**. This is where I adopted the rule I still follow: automate before you scale.
- Built internal applications in **Python (FastAPI, Flask, Streamlit)** for specific needs of the security team.
- Set up simple **CI/CD** pipelines and integrated multiple databases (PostgreSQL, MySQL, Supabase, Firebase) to consolidate data flow between systems, with a focus on the proper handling of sensitive data.

Projects

SafetyKeeper · Occupational Health & Safety Management May 2026 to Jun 2026
NestJS, TypeScript, Next.js, PostgreSQL, Docker *Freelance · Client: JCFireWall*

- Occupational health and safety platform for a company serving multiple corporate clients, replacing spreadsheet-based control with a system featuring a full audit trail.
- Modular **NestJS** back-end with **multi-tenancy** (per-company data isolation), **RBAC** by user role and a **PostgreSQL** schema designed for compliance and history queries.
- **Next.js** front-end for document management, expiration tracking and compliance status. Deployed on a **VPS** with Docker, Nginx, SSL and automated backups.

CUBE · Political Analysis Platform Jul 2025 to Nov 2025
Node.js, Express, TypeScript, Prisma, PostgreSQL, React, Gemini API *Freelance · Client: CUBE Inteligência*

- Full stack platform for monitoring in real time of political mentions, with dashboards sized for traffic peaks during election periods and distinct permissions for internal staff and clients.
- Layered API with **Node.js/Express** and **Prisma ORM**, **JWT** authentication with refresh token rotation, per-route **RBAC** and **Zod** validation.
- Sentiment analysis with the **Google Gemini API**, public data collection with **Apify** and a scheduled RSS aggregator (node-cron). Deployed on a **VPS** with Nginx and **PM2** in cluster mode.

Landing Page · Labor Law Firm Sep 2025 to Oct 2025
React, TypeScript, Vite, Tailwind CSS, Vercel *Freelance · Client: Raquel Ribeiro Advocacia*

- Lead generation page built to strict performance and SEO requirements: **Lighthouse above 95** in all categories, **LCP under 2.5 s**, schema.org structured data, **WCAG 2.1 Level A** accessibility, mobile-first layout and **Vercel** deployment with Git-based CI/CD and preview deployments on every pull request.

MundoPet · E-commerce Marketplace 2024
Node.js, Express, React, Redux, MongoDB *Capstone project · ETEC Hortolândia*

- Marketplace for the pet market, with a **Node.js/Express** back-end, **MongoDB** persistence and a **React/Redux** front-end.

Education

Centro Universitário Estácio de Sá Online
Bachelor's Degree in Software Engineering (in progress) *Jan 2025 to Dec 2028*
Universidade Presbiteriana Mackenzie Campinas, SP, Brazil
English, Cidadão Pró-Mundo Program, full scholarship (Microsoft and SENAI selection, 20 seats) *Jul 2025 to Dec 2030*
SENAI São Paulo "Dr. Celso Charuri" Sumaré, SP, Brazil
Technical Degree in Systems Development *Jan 2025 to Sep 2025*
ETEC Hortolândia Hortolândia, SP, Brazil
Technical Degree in Systems Development + High School *Jan 2022 to Dec 2024*

Courses & Certificates

Microsoft Azure (prep courses, SENAI): AZ-900 Cloud Fundamentals, AI-900 AI in the Cloud, SC-900 Cloud Security
Development: Full Stack Web with Node, JavaScript and TypeScript (Udemy, 2026); Node.js Fundamentals, JavaScript Developer, PHP Experience and Programming Logic (DIO)
Python & Data: Python for Data Science, 3 levels (Data Science Academy); Python Essentials 1 (Cisco); Python Programming, Python Fundamentals, Databases for Data Science and Power BI (SENAI); Oracle APEX (Oracle)
Other: Azure Databricks, Linux Fundamentals and UX Designer (DIO); UX/UI Design, Generative AI and IoT (SENAI)
